

**ABSTRACT**

The invention relates to a method of transferring a multimedia message in a multimedia messaging system, which comprises a terminal (MS) and a multimedia messaging centre (MMSC), which are arranged to communicate

- 5 with each other at least partially wirelessly. The multimedia messaging centre (MMSC) is arranged to receive multimedia messages addressed to the terminal (MS) and transmit a notification message to the terminal (MS) to inform it of a multimedia message addressed to the terminal (MS) which has arrived at the multimedia messaging centre (MMSC). The method comprises transmitting a
- 10 first message (11) wirelessly from the terminal (MS) to the multimedia messaging centre (MMSC), the first message (11) requesting the multimedia messaging centre (MMSC) to transmit a notification message (12) to the terminal (MS) on the multimedia messages addressed to the terminal (MS) which have arrived at the multimedia messaging centre and on which the terminal (MS)
- 15 has not received a notification message yet. The invention also relates to a system for transmitting a multimedia message, and to a terminal and a multimedia messaging centre.
